

Bending the rules *of* cladding

Liberty Infra defies the tyranny of the straight line. It is the skin that lets architecture move—folding, arching, and flowing as if structures themselves have learned the language of grace.

Born from Liberty Infra's relentless pursuit of possibility, it drapes over curves like silk yet holds the quiet strength of stone. It bends without breaking, adapts without compromise, and enhances without excess.

No two pieces are ever alike; each carries its own rhythm of color, depth, and form, echoing the natural irregularity of the world. Feather-light in form yet strong in structure, it transforms surfaces into sculptures and spaces into statements.

With Liberty Infra, form is no longer confined—it is set free.

Technical Superiority At A Glance

Patented Technology	Made from Unfired Natural Clay	Ultra Thin	Flexible	Exterior Grade
High Impact Resistance	Fire-Resistant	Exceptional Weather Durability	Zero Water Absorption	UV Resistant
Noiseless Installation	Customisable	Rapid Installation	High Abrasion Resistance	Eco-Friendly

PRODUCT APPLICATION STEPS

1 Prep The Wall

Ensure it's plumb and level, plastered neatly, dust-free, dry, and non-leaking.

2 Spread Adhesive

Apply **Artifix** uniformly with a toothed trowel, combing lines evenly.

3 Place & Press

Set **Flexura** gently with clean hands; press/roll across the entire surface to expel air bubbles.

4 Space Joints

Use 3 mm spacers on all four sides between pieces for even gaps and to prevent tension/cracks.

5 Grout Cleanly

Mask edges/surfaces with tape; fill joints using a grout cone to keep the product stain-free.

6 Finish

When grout is partially set, scrape or sink joints to depth; once fully dry, wipe the surface and apply **Artiseal** if needed.
